

Specialist in custom DCC installs... sound - lighting - smoke - crew - detailing - coach lighting & population

YouChoos

Individual Model Locomotives

YouChoos DCC Sound

immersive Drive

Certificate & Quick Reference

Thank-you for purchasing a YouChoos sound decoder!

This certificate provides specific details of your decoder including your unique build number. Each sound decoder I load is individually catalogued and assigned a unique certificate, indicating the load date and an individual code...

Your decoder has unique number: CL66-TEMPLATE-1065

YouChoos Sounds

Class 66 Diesel

DCC Address: 3

Included in this package:

PART NUMBER	YouChoos Sounds - Class 66 Diesel YC-66
DECODER	MS series - template
SPEAKER	N/A - template

Functions:

FKey	Category	Action
F0fwd:	LIGHT	F0F Front left marker
F0rev:	LIGHT	F0F Front left marker
F1:	SOUND	Running Sounds
F2:	ACTIVE BRAKE	Active Brake
F3:	SOUND	Horn
F4:	SOUND	Horn 2
F5:	SOUND	Vibration
F6:	LIGHT	FA2 Front right marker / FA1 Rear right marker
F7:	NOTCH UP	Notch Up
F8:	SOUND	Brakes Off
F9:	SOUND	Guard's Whistle
F10:	SOUND	Compressor
F11:	SOUND	Compressor 2
F12:	LIGHT	FA3 Front cab / FA4 Rear cab
F13:	SOUND	Announcement
F14:	SOUND	Brakes Off 2
F15:	SOUND	Truck Squeal
F16:	SOUND	Sander
F17:	SOUND	Horn 3
F18:	SOUND	Horn 7
F19:	SOUND	Mute
F20:	SHUNT + HALF SPEED	Shunting Mode / Half Speed
F21:	SOUND	Horn 8
F22:	SOUND	Horn 4
F23:	SOUND	Start Bell
F24:	SOUND	Horn 6
F25:	LIGHT	FA6 Rear reds / FA5 Front reds
F26:	LIGHT	FA7 Front headlight / FA8 Rear headlight
F27:	VOLUME	Volume Decrease
F28:	VOLUME	Volume Increase

All functions are ON/OFF.

Feature Notes:

Active Braking – To slow down, choose the desired speed on the throttle, then use the Brake key to control the slow-down to that speed. If you prefer more traditional throttle-based braking, simply decrease the value in CV#4, or even simpler: leave ACTIVE BRAKE switched on all the time!

Shunt Mode – Momentum/Inertia is reduced to ¼ the normal effect and the throttle range is halved to simulate driving light-engine.

Quick Select – For steam, switches from standard chuff sounds to light-engine where chuffs are quieter. For hybrid locomotives, switches engine type – usually effective only at standstill. Some steam projects contain a 'QuickSelect#2' which normally gives heavier chuffs compared to the default. For diesel, sometimes provided for alternative cold start.

Solo – usually defined on the same key as QuickSelect for light-engine on a steam loco – has various effects including reducing the effect of momentum.

SpeedLock – while the SpeedLock key is switched on, the throttle will control the engine sounds only, and leaves the physical speed of the motor unchanged.

NotchUp – for diesel/electric projects, the NotchUp key will raise the base engine level to notch 1 when standing idle. Switch off to return to idle. Has no effect while in motion. Allows you to manually rev the engine up.

Coast – for diesel/electric sounds, the Coast key brings the base engine level down to idle, regardless of the current speed. Switch off to return to speed-dependent engine level.

LowBeam – for some projects, a LowBeam key is provided which dims the forward-motion headlights.

Mute – Fades all sounds out to silent until unmuted, where sounds will be faded back to their previous level.

Volume Up/Down – Overall volume level will be decreased / increased gradually while VOLUP / VOLDOWN is switched on, eventually reaching silent or the maximum defined in the project (usually around 90%). Affects CV#266 master volume level. If you lose sound, check that you haven't simply reduced the volume to silent! Default is recommended around 65%.

Dynamic / Exponential Inertia – Linear throttle-to-speed response is not particularly realistic, so speed change is exponential as speed increases, simulating slow starts from standstill. Similarly, harder throttle requests will result in faster acceleration. This is all built-in to the project working automatically on your throttle requests.

Looping Sounds – Some sounds are looping and will continue repeating until that function is switched off.

Steam Chuff Rate – Use CV#267 to adjust the chuff rate to match wheel rotation.

Random Sounds – Some sounds may be configured to play at random intervals, usually at reduced volume.

IMPORTANT – WARRANTY INFORMATION!

Damage caused by mishandling, short-circuit, or undue force is NOT covered by warranty. Normally, a repair/replacement charge will be levied in such cases. Decoders are delicate, so please handle with care. The most common cause of damage is caused by excessive force on wires, or by short-circuit via the speaker output. Also be careful that the coloured coating on the wires does not get pulled back exposing bare wire at the solder pads, thus increasing risk of short-circuit.

More Information on Your Sound Decoder

User Sound Assignments

The following table lists the sound effect files loaded onto your decoder, with their unique sample numbers which are used in CVs to assign a sound to a specific feature. Where a sound has no Function Key listed, this indicates that it is an additional sound included in your project which you can manually assign instead of another sound – for example, an alternative whistle/horn which you can swap in for one of the default ones. Please refer to the supplied CV Table document where you can see which CV is used to assign a sound to each Function Key (starts at CV#513).

Of course there are many more sound files that make up your project, such as engine sounds, braking, set-off etc., but these are not included here – only those that are available as user sounds, assignable to Function Keys.

Random Sounds

Zimo decoders include 8 random sound generators, Z1 to Z8, which are also indicated here along with the sample number assigned to them, and whether they are to be played randomly at standstill, in motion, or both.

Likewise, please refer to the CV Table document supplied with your YouChoos sound decoder to see which CVs are used in random sound definition (CVs#744 to 767 and CVs#315 to 338).

Effect Sound Sample Number	Name	Looping	Function Key(s)	Random Generator	Random at Standstill	Random in Motion
24	Horn		F3 (CV#519)			
25	Horn 2		F4 (CV#522)			
26	Horn 3		F17 (CV#561)			
27	Horn 4		F22 (CV#679)			
28	Horn 5					
29	Sander		F16 (CV#558)			
30	Horn 6		F24 (CV#685)			
31	Brakes Off		F8 (CV#534)			
32	Brakes Off 2		F14 (CV#552)			
33	Link Pipes					
34	Vibration	Loops	F5 (CV#525)			
35	Truck Squeal	Loops	F15 (CV#555)			
36	Guard's Whistle		F9 (CV#537)			
37	Compressor	Loops	F10 (CV#540)			
38	Compressor 2	Loops	F11 (CV#543)			
39	Announcement		F13 (CV#549)			
40	Start Bell		F23 (CV#682)			
41	Horn 7	Loops	F18 (CV#564)			
42	Horn 8	Loops	F21 (CV#676)			
43	Rail Echo					
44	Flange	Loops				

Remember, you can always reset to the project's original configuration if you make a mess, by sending CV#8=8, though note that the DCC Address of the decoder will also be reset (normally back to 3)!

Physical AUX Outputs

The table below states how the physical outputs (for lighting etc.) are configured in your decoder. Outputs that are assigned for FKey0-12 are achieved with Zimo Extended Function Mapping (where CV#61=97). For any outputs assigned to FKeys above FKey12, Swiss Mapping (also known as Zimo Advanced Mapping) is used instead (not shown in this table).

Physical Output	Wire Colour (if wired)	FKey	Effect / Direction	Notes
F0Fwd	WHITE	FKey0	Constant (simple ON/OFF)	F0F Front left marker
F0Rev	YELLOW		Constant (simple ON/OFF)	F0R Rear left marker
FA1	GREEN	FKey6	Constant (simple ON/OFF)	FA1 Rear right marker
FA2	BROWN	FKey6	Constant (simple ON/OFF)	FA2 Front right marker
FA3	-additional-	FKey12	Constant (simple ON/OFF)	FA3 Front cab
FA4	-additional-	FKey12	Constant (simple ON/OFF)	FA4 Rear cab
FA5	-additional-	FKey25	Constant (simple ON/OFF)	FA5 Front reds
FA6	-additional-	FKey25	Constant (simple ON/OFF)	FA6 Rear reds
FA7	-additional-	FKey26	Constant (simple ON/OFF)	FA7 Front headlight
FA8	-additional-	FKey26	Constant (simple ON/OFF)	FA8 Rear headlight

CL66-TEMPLATE-1065 - YouChoos Sounds - Class 66 Diesel

CV List MS series - template – Configuration Values at shipping time

CV	Description	Value	77	Free speed curve	42	150	Experimental motor reg - deviation control	0	269	Lead-chuff accentuated	0	336	Minimum interval for random generator Z8	75
1	Short Address	3	78	Free speed curve	48	151	Motor brake and reduce motor BackEMF in Consist	0	270	Longer chuff length at very low speeds	0	337	Maximum interval for random generator Z8	135
2	Starting voltage	1	79	Free speed curve	54				271	Overlapping effect at high speed	16	338	Playback length for random generator Z8	0
3	Rate of acceleration	20	80	Free speed curve	60	152	Dim Mask 2 - FO7-FO12, RiBi	0	272	Blow-off duration	50	339	NotchUp 1st FKey	7
4	Rate of deceleration	100	81	Free speed curve	68	153	Stop time after DCC signal loss	0	273	Delayed start after blow-off	20	340	Notch level and extra Notch FKeys	1
5	Maximum speed	1	82	Free speed curve	76	154	Zimo configuration part 2	0	274	Blow-off schedule	30	341	Switch input 1 Playback time	0
6	Middle speed	1	83	Free speed curve	84	155	FKey for half-speed	20	275	Engine (chuff) sound volume at low speed	175	342	Switch input 2 Playback time	0
7	Version Number (Part1)	5	84	Free speed curve	92	156	FKey for deactivating momentum	20	276	Engine (chuff) sound volume at high speed and no-load	150	343	Switch input 3 Playback time	0
8	Manufacturer Id / HARD RESET	145	85	Free speed curve	102	157	FKey for MAN function	0				344	Follow-up time for fan noise	0
9	Motor frequency	55	86	Free speed curve	112	158	Sound/RailCom config	0	277	Degree of volume change under load for driving (chuff) sound.	25	345	Quick-select FKey	0
10	EMF Feedback cut-off	0	87	Free speed curve	124	159	Special effects FuncOutput7	0	278	Load change threshold	1	346	Switch collection conditions	3
12	Operation Types - disable specific protocols	5	88	Free speed curve	136	160	Special Effects FuncOutput8	0	279	Reaction time to load change	1	347	Switch-over key for solo driving	0
13	Analog mode active functions F1-F8	3	89	Free speed curve	152	161	Servo outputs: Protocol	0	280	Load influence (DIESEL)	10	348	Switch-over parameters	0
14	Analog functions and Inertia	195	90	Free speed curve	168	162	Servo 1 - Left stop	49	281	Acceleration threshold for full load sound	1	349	Brake Time	10
17	Extended address (byte 1)	192	91	Free speed curve	188	163	Servo 1 - Right stop	205	282	Duration of acceleration sound	50	350	Delay of switchgear sound after start up - ELECTRIC	0
18	Extended address (byte 2)	3	92	Free speed curve	208	164	Servo 1 - Center position	127	283	Engine sound volume at full acceleration	255	351	Smoke fan speed at steady speed	0
19	Consist Address - high	0	93	Free speed curve	230	165	Servo 1 - Rotating speed	10	284	Threshold for deceleration sound	1	352	Smoke fan speed at acceleration and motor start-up - DIESEL	0
20	Consist Address - low	0	94	Free speed curve	252	166	Servo 2 - Left stop	49	285	Duration of reduced volume on deceleration	50			
21	Consist functions for F1 - F8	0	95	Directional speed trimming - REV	0	167	Servo 2 - Right stop	205	286	Volume level during deceleration	125	353	Automatic shut-down of smoke generator	0
22	Consist functions F0 & F9-F12 + DC Inertia	0	97	Consist FKey	0	168	Servo 2 - Center position	127	287	Brake squeal threshold	55	354	Steam chuff frequency at step 5	0
23	Acceleration trimming	0	100	Current asymmetry	0	169	Servo 2 - Rotating speed	10	288	Minimum driving time before brake squeal	50	355	Exhaust fan speed at stand-still (steam and diesel)	0
24	Deceleration trimming	0	101	Comparison asym. offset	0	170	Servo 3 - Left stop	49	289	Thyristor - stepping effect	1	356	Speedlock Key	0
27	Direction dependent stops (Lenz ABC)	0	105	User CV / Manuld	145	171	Servo 3 - Right stop	205	290	Thyristor - pitch at medium speed	20	357	Thyristor - lowering volume at high speed	0
28	RailCom Configuration	3	106	User CV / Provider Id	13	172	Servo 3 - Centre position	127	291	Thyristor - pitch at max speed	100	358	Thyristor - volume reduction curve at high speed	0
29	Configuration bits - decoder properties	14	107	Light suppression on cab side 1 - front	0	173	Servo 3 - Rotating speed	10	292	Thyristor - speed step for pitch increase	10
